Claim 41; Page 65-69; 98pp; English.

C A gene fusion (T38249) comprises coding sequences for the Yersinia pestis F1 antigen (see also T38248) including the signal sequence and for the Y. pestis V antigen (see also T38243), joined by a Sequence encoding a 6-amino acid peptide linker. It was obtd. by PCR amplification of the individual genes using primers (see also T38245) based on the genes and including linker sequences. The gene fusion (see also T38256) can be used to produce F1/V fusion protein (W01044) in transformed cells, esp. gut-colonising organisms, to induce an immune response against Y. pestis, the sequence 1530 BP; 499 A; 296 C; 312 G; 423 T;

Versinia pestis V antigen and Fl antigen or their protective epitopic parts - useful in vaccine for protection against plague Disclosure; Page 51-55; 98pp; English.

A gene fusion (T38256) comprises coding sequences for the Yersinia pestis Fl antigen (see also T38244) (without the signal sequence) and for the Y. pestis V antigen (see also T38243), joined by a sequence encoding a 6-amino acid peptide linker. It was obtd. by TCR amplification of the individual genes using primers (see also T38245) based on the genes and including linker sequences. The genes also T38245) can be used to produce F1/V fusion protein (w01045) in transformed cells, esp. gut-colonising

CC T0422-23 are DNA sequences (lcrV) encoding all or a protective epitopic part of the mature V protein with maltose binding protein or expressed as a fusion protein with maltose binding protein or glutathione- S-transferase in 3 different plasmid vectors. Y pestis is the highly virulent causative organism of plague in a wide range of animals, including man. The V antigen (LcrV) is an unstable 37.3 kDa monomeric peptide encoded on the ca. 70 kb Lcr plasmid. The V antigen is postulated to act as a virulence antigen, and transformed microorganisms contg. recombinant DNA encoding a V antigen protein/ peptide are useful in vaccines to protect against plague.

CC AlcrV gene sequence (T38242) codes for the Yersinia pestis V CC antigen (W01040), which is capable of evoking protective immune CC composes in animals. The gene was amplified from Y. pestis CC DNA by PCR using primers (T38250-51) homologous to the 5' and 3' CC ends of the gene. The gene was inserted into vector pMAL-p2, CC pMAL-c2 or pEEX-5X-2 (see also T38243) to allow prodn. of C recombinant V antigen for use in vaccines against plague.

CC Expression in gut-colonising organisms and attenuated Salmonella CC typhi allows prodn. of live vaccines. F1/V antigen fusions were CC also created (see also T38249 and T38256). The gene can itself be CC considered the colonism of the production of the colonism of the colonism of the pertical colonism of the coloni

Claim 6; Page 15-16; 25pp; English.

T04222-23 are DNA sequences (lcrV) encoding all or a protective epitopic part of the mature V protein of Versinia pestis. The protein was expressed as a fusion protein with maltose binding protein or glutathione- S-transferase in 3 different plasmid vectors. Y. pestis is the highly virulent causative organism of plague in a wide range of animals, including man. The V antigen (LcrV) is an unstable 37.3 kDa monomeric peptide encoded on the ca. 70 kb Lcr plasmid. The V antigen is postulated to act as a virulence antigen, and transformed microorganisms contg. recombinant DNA encoding a V antigen protein/ peptide are useful in vaccines to protect against plague.

Claim 8; Page 53; 75pp; English.
This is the nucleotide sequence of a Yersinia pestis F1 antigen, used in the method of the invention. Plasmid and host cells are used to produce recombinant antigens, especially Yersinia pestis antigens. The recombinant antigens can be used in vaccines that are capable of protecting an animal from contracting plague.

Disclosure; Page 19-20; 27pp; English. The sequence represents the plasmid pFORF1b including the entire v. pestis cafl (F1) antigen gene having a 5' tail including a Sac restriction site, and up to TATAG downstream of the cafl ORF. The DNA construct can be used to transform human or animal gut colonizing microorganisms, specifically attenuated Salmonella typhimurium or Salmonella typ

This is the nucleotide sequence of a Yersinia pestis F1 antigen, used in the method of the invention. Plasmid and host cells are used to produce recombinant antigens, especially Yersinia pestis antigens. The recombinant antigens can be used in vaccines that are capable of protecting an animal from contracting plague.

                                             epitopic parts - useful in vaccine for protection against plague Claim 41; Page 61-62; 98pp; English.

A DNA sequence (738248) comprises the cafl gene, including the signal sequence, coding for the F1 antigen (W01043) of Yersinia pestis. It was obtd. by PCR amplification (see also T38257-58) of Y. pestis DNA. The PCR product was cloned into plasmid pBKCMV and the resulting plasmid (pF1AB) was used to transform E. coli we have a comparable of the product was considered by i.m. injection, and the product was considered by i.m. injection, and the product was used to transform E. coli we have a considered by i.m. injection, and the product was considered by i.m. injection, and injection.

This is the nucleotide sequence of a Yersinia pestis F1 antigen, us in the method of the invention. Plasmid and host cells are used to produce recombinant antigens, especially Yersinia pestis antigens. The recombinant antigens can be used in vaccines that are capable o protecting an animal from contracting plague.

                                                                                                                               Protection of animals against plague - using nucleic acid encoding antigen from Yersinia, Pasteurella and Francisella spp. Claim 8: Page 64; 75pp; English.
This is the nucleotide sequence of a Yersinia pestis Fl antigen, used in the method of the invention. Plasmid and host cells are used to produce recombinant antigens, especially Yersinia pestis antigens. The recombinant antigens can be used in vaccines that are capable of protecting an animal from contracting plague.

Protection of animals against plague - using nucleic acid encoding antigen from Yersinia, Pasteurella and Francisella spp.

Claim 8; Page 61; 75pp; English.

This is the nucleoride sequence of a Yersinia pestis F1 antigen, us in the method of the invention. Plasmid and host cells are uşed to produce recombinant antigens, especially Yersinia pestis antigens. The recombinant antigens can be used in vaccines that are capable oprotecting an animal from contracting plague.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Protection of animals against plague - using nucleic acid encoding antigen from Yersinia, Pasteurella and Francisella spp. Claim 8; Pages 59-60; 75pp; English.

This is the nuclectide sequence of a Yersinia pestis F1 antigen, used in the method of the invention. Plasmid and host cells are used to produce recombinant antigens, especially Yersinia pestis antigens. The recombinant antigens can be used in vaccines that are capable of protecting an animal from contracting plague.

Sequence 474 BP; 143 A; 106 C; 99 G; 126 T;
   DNA constructs capable of transforming microorganisms - which can used a live or attenuated vaccines which induce an immune respons against Yersinia pestis, at mucosal surfaces. Claim 7; Page 15-16; 27pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                        17-DEC-1995 (first entry)
Yersinia pestis cafl (F1) antigen in plasmid pFGAL2a.
Vaccine; antigen; Salmonella typhimurium; Salmonella typhi;
bubonic plague; pneumonic plague; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                104
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   145
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       WO9824912-A2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       54
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           95
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  45

The DNA construct can be used to transform human or animal gut colonizing microorganisms, specifically attenuated Salmonella typhimurium or Salmonella typhi. The transformed microorganisms can be used as live/attenuated to the colonization of the colonization 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             vaccines which induce immune responses at mucosal surfaces. The vaccines provide protection against infection with Y. pestis, at are parenterally and orally active vaccines offering protection against bubonic and pneumonic plague.
